

### CMS BESPOKE DESIGNED WEBSITE

All our websites are bespoke designed and created custom to your needs and content. All sites are have a very user-friendly Content Management System (CMS), which enables the client to access and make small changes and additions once the site is live. Depending on the client's budget and requirements, websites are either designed and developed using WIX premium web builder, or with custom development in Wordpress, using one of our professional developers.

## FULLY MOBILE RESPONSIVE

All our website designs are created to be fully mobile responsive and work on all devices, whether desktop, laptop, ipad / tablet or smart phone.

## WIREFRAMES & UX

A wireframe is used to layout content and functionality on a page which takes into account user needs and user journeys, along with organising the hierarchy of content, site map and navigation and links etc. Wireframes are used early in the development process to establish the basic structure of a page before the visual design and content is created. For larger websites, we recommend going through the wireframing process, however for small brochure style sites, this is not necessarily needed.
